Interpon D Superdurable Anodic Collection

For a precious finish

Your imagination starts with our finish

AkzoNobel

Interpon D Anodic Collection

Interpon D2525 superdurable and metallic-effect finishes

The Interpon D2525 Anodic Collection of metallic-effect powder coatings helps architects and designers imagine designs that have the stunning look of anodized aluminum.

Available in an amazing range of matt and metallic-effect finishes, the innovative Interpon D2525 Anodic powder coatings comprise a beautiful collection of colors, from shiny blacks to soft silvers, steely blues to earthy bronzes, to match every mood and style.

The ideal alternative to anodized aluminum for windows and facades, an Interpon D2525 Anodic finish delivers superior color and gloss retention and better color consistency. Surfaces are also much easier to repair should the coating be chipped or damaged during fabrication or installation. Its proven resistance to weathering is supported by a long-term guarantee for a truly remarkable stand-out performance.

Transparency and reliability

Building a sustainable future

The Interpon D2525 Anodic collection is one of a family of products that is not just helping us to imagine the future; it is also protecting it. Backed by an Environmental Product Declaration (EPD), the raw materials, manufacture and transportation associated with creating Interpon D have been assessed by an independent third-party for transparent sustainability credentials.

Reduced energy, increased productivity and lower carbon footprint

Interpon D2525 Anodic is formulated in Interpon D Low-E technology, which supports the sustainability goals across the construction supply chain in one of two ways:

- Curing at a lower temperature (30°C lower than 'traditional' powder coatings).
- Curing at a faster line speed.

In both cases, Interpon D2525 Anodic helps to reduce the total energy consumed, lowering carbon emissions, and enhancing production line efficiencies while still delivering the optimum level of performance to leave a lasting legacy and protect the world around us.

Creating futures that last

You can rely on us. Our Interpon D2525 Anodic collection delivers on its promised durability levels in terms of color retention and film integrity.

- Offering up to 25 years global warranty on the coating performance for the Interpon D2525 Anodic range when applied by an Interpon D Approved Applicator.
- Qualicoat Class 2 and GSB Master certifications.
- Meets the performance requirements of AAMA 2604 and BS EN 12206.

* Differing warranty terms applicable for UK & Ireland. Please consult with local AkzoNobel representatives.
